Comparative Anatomy and Histology | ScienceDirect

anatomy and histology of the digestive system The digestive system consists of the digestive tract, or gastro-intestinal (GI; gas tr -in-tes tin- l) tract, plus specific associatedorgans.

What Is Anatomy and Physiology?

Anatomy and Histology. A major in Anatomy and Histology is offered by the School of Medical Science, Faculty of Medicine and Health.

Units of study in this major are mostly available at standard and advanced level. The Discipline of Anatomy and Histology is internationally recognised for both education and research in human

anatomy, histology and neuroscience.

Microscopic anatomy, also known as histology, is the study of cells and tissues of animals, humans and plants that are too small to been seen with the naked eye.

[Anatomy and Histology - Science - The University of Sydney](#)

Anatomy is one of the most difficult subjects you will have to learn during your studies. It consists of two main divisions: macroscopic (or “ gross ” anatomy) and microscopic anatomy. The former deals with large structures that are mostly seen with the naked eye, while the latter involves the study of tissues and their

---

organization into organs and systems on a microscopic level.

## Anatomy and Histology of the Digestive System

What type of cell layer is found in the lung air sacs, lining of blood vessels, and serous membranes?

Anatomy: What is it and why is it important?

Anatomy and histology is the study of the structure of living things. Your introduction to the area is through the study of cell structure (histology) and the basic tissue of mammalian biology and musculo-skeletal anatomy. In senior year we divide your studies into four disciplines.
